INTERIOR POINT METHODS FOR LINEAR PROGRAMMING

Special Editors: David M. Gay, Masakazu Kojima, and Richard Tapia

PREFACE 1

YINYU YE (Iowa City, Iowa) AND PANOS M. PARDALOS (University Park, Pennsylvania)
A Class of Linear Complementarity Problems Solvable in Polynomial Time 3

ROBERT M. FREUND (Cambridge, Massachusetts)
Theoretical Efficiency of a Shifted-Barrier-Function Algorithm for Linear Programming 19

D. DEN HERTOG, C. ROOS, AND T. TERLAKY (Delft, The Netherlands)
A Potential-Reduction Variant of Renegar's Short-Step Path-Following Method for Linear Programming 43

PANOS M. PARDALOS (University Park, Pennsylvania), YINYU YE (Iowa City, Iowa), AND CHI-GEUN HAN (University Park, Pennsylvania)
Algorithms for the Solution of Quadratic Knapsack Problems 69

MICHAEL J. TODD (Ithaca, New York)
The Affine-Scaling Direction for Linear Programming Is a Limit of Projective-Scaling Directions 93

ROBERT J. VANDERBEI (Murray Hill, New Jersey)
Splitting Dense Columns in Sparse Linear Systems 107

K. KIM AND J. L. NAZARETH (Pullman, Washington)
The Decomposition Principle and Algorithms for Linear Programming 119

MASAKAZU KOJIMA (Tokyo, Japan) AND NIMROD MEGIDDO (Tel Aviv, Israel)
The Relation Between the Path of Centers and Smale's Regularization of the Linear Programming Problem 135

KATHRYN TURNER (Logan, Utah)
Computing Projections for the Karmarkar Algorithm 141

SHINJI MIZUNO (Tokyo, Japan)
$O(n^pL)$-Iteration and $O(n^3L)$-Operation Potential Reduction Algorithms for Linear Programming 155

Table of Contents Continued

K. O. Kortanek, Florian Potra, and Yinyu Ye
(Iowa City, Iowa)
On Some Efficient Interior Point Methods for Nonlinear Convex Programming 169

Irvin J. Lustig (Princeton, New Jersey), Roy E. Marsten
(Atlanta, Georgia), and David F. Shanno
(New Brunswick, New Jersey)
Computational Experience With a Primal-Dual Interior Point Method for Linear Programming 191

Kurt M. Anstreicher (New Haven, Connecticut)
On Monotonicity in the Scaled Potential Algorithm for Linear Programming 223

Sanjay Mehrotra (Evanston, Illinois)
On Finding a Vertex Solution Using Interior Point Methods 233

Stefano Herzel, Maria Cristina Recchioni, and
Francesco Zirilli (Roma, Italy)
A Quadratically Convergent Method for Linear Programming 255

David M. Gay (Murray Hill, New Jersey)
Massive Memory Buys Little Speed for Complete, In-Core Sparse Cholesky Factorizations on Some Scalar Computers 291

Paul D. Domich (Boulder, Colorado), Paul T. Boggs
(Gaithersburg, Maryland), Janet E. Rogers (Boulder, Colorado),
and Christoph Witzgall (Gaithersburg, Maryland)
Optimizing Over Three-Dimensional Subspaces in an Interior-Point Method for Linear Programming 315

R. A. Tapia (Houston, Texas) and Yin Zhang
(Catonsville, Maryland)
An Optimal-Basis Identification Technique for Interior-Point Linear Programming Algorithms 343
